Hi Marcia

Can you call me on my cell when you have a chance. I am not sure what to do in regards to Aaron's questions. I am not one to just ignore e-mail so I feel I need to respond in some way. I have reviewed the CAP and have a number of concerns but I am not sure it is a good idea to get sucked into a legal case any further then we already are. Kira

But wait a minute -- these questions are proper to the 'investigation' phase, are they not? That phase is past.
Am I not right on this?

Are you suggesting, or supporting me in, my asking Mike if HE thinks what they are proposing is adequate?
Won't he be bound to comment on that either way?

It's becoming difficult for me to continue 'getting' all this. Definitely burning out on it after 3 continuous years
of daily crucial dealing in a world that in my over 6 decades I've never given a second thought to.

sorry ..

Aaron,

I would second Kira on this, and go further to say you should consider putting these inquiries on the

record for the comment period in Ecology.
I think you have phrased your concerns very well.

Marcia

Hi Aaron

I think it is important that you pose these questions to Ecology since they are the lead regulatory agency on this site. Kira

Marcia and Kira -

I don't know enough to know exactly where to begin and what to look for but these questions do arise:

Does it appear to you from your read-thru of the plan, after having been in on the months of previous sampling and testing, that this is 'the way to go' with this cleanup of this site? Do you believe that a more broadly based ERH plan would be the more reasonable choice given what we know? Would you expect that the offered plan, splitting our property off to receive a remediation process that differs from the treatment that the primary property will receive, WILL result in our property being cleaned up within the same time-frame

as the Heaven Supply property?

Also, do you feel that it would be more reasonable in terms of safety to have continuous monitoring built into the plan? How great IS the danger of spiking of highly contaminated vapors into our homes as the underground sludge is heated under pressure?

(Is it truly 'safe' for the Brown and Ayers families to be residing that close to this 24/7 process of intense heating of carcinogens with young children in the home?)

Thank you
